GEOCHIMICA ET COSMOCHIMICA ACTA

EXECUTIVE EDITORS

PROF. C. W. CORRENS *Sedimentpetrographisches Institut der Universität, Lotzestr.* 13, *Göttingen, Germany*
PROF. E. INGERSON *Department of Geology, University of Texas, Austin* 12, *Texas, U.S.A.*
PROF. L. R. WAGER, F.R.S. *Department of Geology and Mineralogy, The University Museum, Oxford, England*

EDITORS

PROF. L. H. AHRENS *Department of Chemistry, University of Capetown, Rondebosch, Cape Province, South Africa*
DR. S. R. NOCKOLDS *Department of Mineralogy and Petrology, The University, Cambridge, England*
PROF. H. C. UREY, For. Mem. R. S. *University of California, La Jolla, California, U.S.A.*
DR. JOHN VERHOOGEN *Department of Geology, University of California, Berkeley, California, U.S.A.*
PROF. A. P. VINOGRADOV *Vernadsky Institute, Moscow, U.S.S.R.*
PROF. W. A. WAHL, *Observatoriegaten* 8, *Helsingfors, Finland*

INFORMATION FOR CONTRIBUTORS

I. GENERAL

1. Papers should be submitted to the appropriate Executive Editor—Prof. L. R. WAGER for papers from the United Kingdom and British Commonwealth, and for papers in English from Europe; Prof. C. W. CORRENS for papers in German or French; Prof. E. INGERSON for papers from the American continents. Papers submitted for publication will naturally be judged from the standpoint of scientific originality and novelty. Technical details of apparatus used in scientific investigation can, however, be presented in brief notes. Critical comments or preliminary results requiring early publication should be submitted as letters to the editors. Where possible, letters should be confined to 500 words. The preparation of progress reports and review articles will be invited by the editors from time to time. The journal appears as independent and complete numbers, which are combined into volumes of about 300 pages.

2. Only papers which have not been previously published can be accepted. Authors must agree not to publish elsewhere a paper submitted to and accepted by *Geochimica et Cosmochimica Acta.*

3. Fifty reprints of each paper are provided free. Additional copies can be purchased if ordered at the time the first proofs are returned. A reprint order form will accompany first proofs.

II. SCRIPT REQUIREMENTS

1. Scripts must be written in one of the three official languages—English, French or German.

2. The script should be typed (not a carbon copy). The text must be ready for printing and should be carefully checked for errors. Authors will receive proofs for correction. The original script plus two copies will assist in expediting publication.

3. Illustrations should accompany the script, mounted on separate sheets. Line diagrams that require to be redrawn should include all relevant details. Half-tone illustrations should be restricted to the minimum necessary. Photographs should be enlarged sufficiently to permit their clear reproduction, and if words or numbers appear on them, two copies should be sent, one clearly printed and the other without inscription. All illustrations should be provided with descriptive legends, which should be given on a separate sheet. Any lettering on diagrams—other than Greek letters, symbols, etc.—should be stencilled and should be sufficiently large and bold to permit reproduction when the diagram has been reduced to a size suitable for inclusion in the journal.

4. References in the text should be given by quoting the author's name and year of publication, i.e. AHRENS (1952). **Full references should be listed at the end of each paper, in alphabetical order, in the following manner:**

AHRENS, L. H. (1952) The use of ionization potentials—I. Ionic radii of the elements. *Geochim. et Cosmochim. Acta* **2**, 155–169.

and should include the full title of the article, standard abbreviated title of the journal, year, volume number and inclusive page numbers.

5. The text of articles submitted should be concise and in a readily understandable style. The technical description of the methods used should only be given in detail when such methods are new. The essential contents of each paper should be briefly recapitulated in an abstract in English. Such an abstract may, however, be submitted by the author in the language of the original typescript for translation into English by the editorial staff.

6. To conserve space, authors are requested to mark less important portions of the paper (such as description of methods, record of experimental results, etc.) for printing in smaller type.

7. Indices of refraction should be denoted by the symbols α, β, γ, ω, ε, n and vibration directions by X, Y, Z, O and E.

CONTENTS

Numbers 1/2

Tom. F. W. Barth: Abundance of the elements, areal averages and geochemical cycles 1

M. H. Carr and K. K. Turekian: The geochemistry of cobalt . . 9

W. J. Knapp and H. Flood: Activities and structure of some borosilicate melts 61

J. F. Evernden, G. H. Curtis, J. Obradovitch and R. Kistler: On the evaluation of glauconite and illite for dating sedimentary rocks by the potassium-argon method 78

R. R. Brooks and L. H. Ahrens: Some observations on the distribution of thallium, cadmium and bismuth in silicate rocks and the significance of covalency on their degree of association with other elements . . . 100

D. M. Shaw: Element distribution laws in geochemistry 116

H. W. Fairbairn, P. M. Hurley and W. H. Pinson: The relation of discordant Rb–Sr mineral and whole rock ages in an igneous rock to its time of crystallization and to the time of subsequent Sr^{87}/Sr^{86} metamorphism . 135

Geochemical Notes

R. R. Brooks and L. H. Ahrens: The determination of indium and thallium in G–1, W–1 and other silicate rocks by a new technique . 145

C. C. McMullen, C. B. Cragg and H. G. Thode: Absolute ratio of B^{11}/B^{10} in Searles Lake borax 147

Letter to the Editors

E-an Zen: Partial molar volumes of some salts in aqueous solutions . 151

Academy of Sciences of the U.S.S.R.:

Abstracts from proceedings of the Institute for the geology of ore deposits, petrography, mineralogy and geochemistry 152

Errata 154

Numbers 3/4

Bartholomew Nagy and George C. Gagnon: The geochemistry of the Athabasca petroleum deposit. I. 155

T. C. Hoering and P. L. Parker: The geochemistry of the stable isotope of chlorine 186

E. R. DuFresne and E. Anders: The record in the meteorites—V. A thermometer mineral in the Mighei carbonaceous chondrite . . . 200

J. Duchesne, J. Depireux and J. M. van der Kaa: Origin of free radicals in carbonaceous rocks 209

Masatake Honda and James R. Arnold: Radioactive species produced by cosmic rays in the Aroos iron meteorite 219

S. Matthes: Ergebnisse zur Granatsynthese und ihre Beziehungen zur natürlichen Granatbildung innerhalb der Pyralspit-Gruppe 233

Geochemical Notes:

C. H. Oppenheimer: Note on the formation of spherical aragonitic bodies in the presence of bacteria from the Bahama Bank 295

Hiroshi Hamaguchi, Rokuro Kuroda, Kenji Tomura, Masumi Osawa, Kenju Watanabe, Naoki Onuma, Tsutomu Yasunaga, Kyoichi Hosohara and Tadashi Endo: Values for trace elements in G–1 and W–1 with neutron activation analysis 296

Book Reviews 300

Papers to be published in future issues 302
